

AKBAR BABAYEV

AI Engineer

ekber276@gmail.com | +90 538 866 57 89 | Turkey, Istanbul

SUMMARY

Passionate computer engineer with 3 years of experience as a freelancer, specializing in Artificial Intelligence and Large Language Models (LLMs). I have built numerous projects both independently and for clients. Now, I am looking for a full-time role where I can contribute to complex engineering challenges and grow alongside a collaborative team.

WORK EXPERIENCE

Freelance AI/ML Engineer

Nov 2024 – Present

- Building production-ready AI automation systems that power real business operations, integrating autonomous agents with advanced RAG, KAG, and CAG retrieval pipelines. My work focuses on LLM post-training—leveraging LoRA, supervised fine-tuning (SFT), and NEFTune noise embeddings—alongside end-to-end NLP solutions designed to process, analyze, and evaluate massive text corpora.

Software Engineer

May 2026 – Present

- Architecting end-to-end POS automation infrastructure built to withstand high-volume restaurant environments, featuring resilient multi-platform order aggregations, automated fiscal and thermal receipt dispatching, and live inventory sync to eliminate operational bottlenecks.

Researcher

Sep 2026 – Present

- AI Researcher focused on low-resource and agglutinative language challenges, with an emphasis on Korean NLP. Investigating tokenization strategies, morphological parsing, and LLM fine-tuning pipelines on complex Korean corpora.

EDUCATION

B.Sc. Erciyes University

Sep 2020– Jul 2026

- Korean Language And Literature

MSc. Erciyes University

Sep 2026 – Present

- Korean Language And Literature

Note: Building NLP pipelines on Korean language

SKILLS

- Python
- Rust
- SQLite
- Algebra
- Problem Solving
- Statistics
- Relationship Management
- Event Organization
